PROFESSIONAL SUMMARY

Full-Stack Software Engineer specialized in building scalable, high-performance applications with **Node.js, TypeScript, React, and PostgreSQL**. Proven track record of architecting production systems serving **10,000+ users** and optimizing infrastructure using **AWS, Terraform, and Docker**. Experienced in driving end-to-end feature delivery and reducing system latency in fast-paced environments. Passionate about building robust fintech solutions and enhancing developer experience through CI/CD automation

EDUCATION

Centennial College

Bachelor's, Computer Science

GPA: 3.9

- Relevant Coursework: Data Structures & Algorithms, OOP, Database Management, Web App Dev, Software Engineering Principles, System Design, Cloud Computing, Computer Networking, API Dev, Agile Methodologies.

WORK EXPERIENCE

DiceMail

Software Engineer

Toronto, ON, Canada

April 2025 - Present

- Reduced search latency to under 50 ms and supported 10,000+ users by engineering a scalable full stack backend with Python, JavaScript (ReactJS), NodeJS, and Go, implementing secure API integrations, and leading containerization with Docker, Kubernetes, and Redis.
- Enabled rapid feature delivery and robust data protection by driving MVP development, facilitating code reviews, and managing workflows with Agile practices using GitHub, Jira, Confluence, and Slack to refine features and secure the data pipeline.
- Enhanced platform extensibility for future integration of computer vision and deep learning by designing a modular backend with RESTful API support, cURL-based testing, and readiness for OpenCV, TensorFlow, PyTorch, and scalable data pipelines with Angular and Vue frontends.

Vital Plus - Intern

Full-Stack Developer

Toronto, ON, Canada

January 2024 - April 2024

- Achieved 90% unit-test coverage and zero critical bugs by engineering REST and GraphQL APIs with Node.js, Express.js, and TypeScript, integrating APIs with HTML-based frontends and Pytorch-powered data-driven features.
- Accelerated feature delivery by 25% in Agile sprints by designing Figma mockups and implementing responsive React components, ensuring seamless RESTful API and HTML integration.
- Enabled continuous deployment and minimized downtime to under 1% for AWS-hosted web apps by automating CI/CD pipelines with GitHub Actions, Docker, and AWS EC2, and tracking progress with Jira.

PROJECTS

AI Document Analysis Platform - [Link to project](#)

January 2025 - March 2025

- Accelerated document analysis workflow by 40% by engineering a full-stack AI-powered platform with automated summarization and contextual Q&A, utilizing React, TypeScript, Python/Django, and OpenAI API.
- Reduced user wait times by 60% by implementing asynchronous, non-blocking user experience using React Query for real-time status polling and Django backend integration.
- Enhanced deployment reliability and scalability by containerizing the application stack (frontend, backend, PostgreSQL) with Docker, supporting seamless development and production workflows.

GoFeedEngine - [Link to project](#)

May 2024 - July 2024

- Achieved a 99.9% API uptime and supported 1,000+ daily users by designing and implementing a high-performance RESTful API backend in Go using Chi router with secure API key authentication and middleware.
- Reduced data latency by 70% by engineering a concurrent data pipeline with Goroutines and background workers for real-time RSS feed aggregation and personalized content delivery.
- Increased database reliability and scalability by utilizing PostgreSQL, managing schema migrations with Goose, and implementing type-safe SQL queries with SQLC to ensure robust data integrity.

SKILLS

Skills: JavaScript, C++, TypeScript, Python, C#, HTML/CSS, React.js, Next.js, Node.js, Express.js, ASP.NET, Tailwind CSS, REST APIs, FastAPI, PostgreSQL, MySQL, MongoDB, DynamoDB, NoSQL, Microservices, AWS (EC2, RDS, Lambda, S3), Docker, GitHub Actions, CI/CD, Postman, Unit Testing, Agile/Scrum, Git, JIRA
