PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2+ years of combined academic and project experience in Node.js, TypeScript, React, Next.js, Tailwind CSS, and PostgreSQL. Skilled in building scalable APIs, creating accessible UIs with Figma, managing workflows with Jira, and AWS cloud deployment. A collaborative problem-solver passionate about inclusive digital products and generative AI solutions.

EDUCATION

Centennial College

Bachelor's, Computer Science

GPA: 3.73

- Relevant Coursework: Data Structures & Algorithms, OOP, Database Management, Web App Dev, Software Engineering Principles, System Design, Cloud Computing, Computer Networking, API Dev, Agile Methodologies.

WORK EXPERIENCE

DiceMail

Software Engineer

Toronto, ON, Canada

April 2025 - Present

- Achieved sub-50 ms semantic search latency for 10,000+ users by architecting backend systems with NodeJS, Python, and Go, and building a ReactJS and TypeScript frontend, utilizing JavaScript for seamless, high-performance integration.
- Accelerated feature delivery and improved product-market fit by partnering with designers and PMs to iterate features based on user feedback, prioritizing robust data protection and utilizing Docker Compose and Redis task queues with strong DevOps practices.
- Increased scalability and reliability for 10,000+ users by engineering universal architecture with NodeJS, Java, and TypeScript for SMTP/IMAP adapters and threaded message storage, supporting future expansion and seamless integration.

Recipe Catalog - Team Project

Backend Developer

Remote

September 2024 - December 2024

- Reduced complex query latency to under 200 ms by designing and indexing semantic PostgreSQL schemas and optimizing queries, leveraging JavaScript for backend logic to enhance system performance.
- Increased deployment reliability and enabled hands-off releases by implementing automated DevOps pipelines and configuring CloudWatch alerts, streamlining build, test, and deploy processes for the team.
- Accelerated frontend integration by 25% and improved feature usability by authoring Swagger/OpenAPI documentation and incorporating user feedback from frontend developers to iterate on API features.

Vital Plus - Team Project

Full-Stack Developer

Toronto, ON, Canada

January 2024 - April 2024

- Increased API reliability and code quality to 90% unit-test coverage by implementing test-driven development and integrating JavaScript best practices while building REST and GraphQL APIs with Node.js, Express.js, and TypeScript in a 4-developer team.
- Enhanced user experience and feature usability by designing and developing responsive React components from Figma prototypes and rapidly incorporating user feedback into product iterations in a fast-paced Agile environment.
- Achieved zero-downtime deployments and improved DevOps efficiency by developing end-to-end CI/CD pipelines using GitHub Actions, Docker, and AWS EC2 with CloudWatch monitoring, and coordinating semantic versioning for seamless releases.

PROJECTS

AI Document Analysis Platform - [Link to project](#)

January 2025 - March 2025

- Accelerated document analysis by 60% by engineering a full-stack AI-powered platform using React, TypeScript, JavaScript, and Python/Django, incorporating semantic search and contextual Q&A features based on user feedback.
- Enabled seamless real-time status updates and reduced user wait times by 40% by implementing non-blocking UX with React Query and JavaScript for real-time polling, iterating on features using user feedback.
- Improved deployment consistency and developer onboarding speed by 50% by containerizing frontend, backend, and PostgreSQL services with Docker, applying DevOps best practices and semantic versioning.

GoFeedEngine - [Link to project](#)

May 2024 - July 2024

- Increased API performance and scalability for user-facing features by designing and deploying a high-performance Go API with Chi router, integrating JavaScript-based user interfaces, and gathering user feedback to iterate on authentication and subscription management.
- Reduced latency and improved real-time content delivery by 40% by engineering a concurrent data pipeline with Goroutines and PostgreSQL, leveraging semantic analysis of RSS data and applying DevOps best practices for continuous deployment.
- Enhanced data integrity and reliability across multiple releases by utilizing PostgreSQL, managing schema migrations with Goose, and generating type-safe SQL queries with SQLC, incorporating user feedback to optimize semantic data structures and support robust feature development.

SKILLS

Skills: JavaScript, C++, TypeScript, Python, C#, HTML/CSS, React.js, Next.js, Node.js, Express.js, ASP.NET, Tailwind CSS, REST APIs, FastAPI, PostgreSQL, MySQL, MongoDB, DynamoDB, NoSQL, Microservices, AWS (EC2, RDS, Lambda, S3), Docker, GitHub Actions, CI/CD, Postman, Unit Testing, Agile/Scrum, Git, JIRA
